SE4a_u1_04k_001_1

The outermost layer of the Earth is the crust. ( )
[--Ans: ✓--]

SE4a_u1_04k_002_1

The mantle contains hot flowing magma. ( )
[--Ans: ✓--]

SE4a_u1_04k_003_1

The centre of the Earth is the mantle, which has a very high temperature. ( )
[--Ans: ×--]

SE4a_u1_04k_004_1

The centre of the Earth is the crust. It is mainly made up of rocks. The temperature is very high. ( )
[--Ans: ✓--]

SE4a_u1_04k_005_1

The crust is mainly made up of a complete piece of rock. ( )
[--Ans: × --]

SE4a_u1_04k_006_1

Plates move slowly when the magma in the mantle flows. ( )
[--Ans: ✓--]

SE4a_u1_04k_007_1

Earthquake is a natural phenomenon caused by plate movement and collision. ( )
[--Ans: ✓--]

SE4a_u1_04k_008_1

Shale is a kind of igneous rock. ( )
[--Ans: ×--]

 © Educational Publishing House

SE4a_u1_04k_009_2

Both marble and gneiss are sedimentary rocks. ( )
[--Ans: ×--]

SE4a_u1_04k_011_1

Different kinds of soil have different drainage capacities. Sandy soil has the weakest drainage capacity, while clay soil has the strongest drainage capacity. ( )
[--Ans: ×--]

SE4a_u1_04k_012_1

The Earth rotates on a real axis every day. ( )
[--Ans: ×--]

SE4a_u1_04k_013_1

We can see the Sun rising and setting every day because of the Earth's rotation. ( )
[--Ans: ✓ --]

SE4a_u1_04k_014_1

During the day, the length of a shadow changes at different times. However, the direction of the shadow does not change. ( )
[--Ans: ×--]

SE4a_u1_04k_015_1

A sundial is a device that people in the past used to tell the time by observing the shadow. ( )
[--Ans: ✓--]

SE4a_u1_04k_016_1

The Earth moves around the Moon. This is called revolution. ( )
[--Ans: ×--]

SE4a_u1_04k_017_1

Day and night repeats regularly because the Sun moves around the Earth. ( )
[--Ans: ×--]

SE4a_u1_04k_018_1

When the northern hemisphere receives overhead sunlight, it is winter in the northern hemisphere and summer in the southern hemisphere. ( )

[--Ans: ×--]

SE4a_u1_04k_019_1

There is a leap year once in every 5 years. ( )

[--Ans: ×--]

SE4a_u1_04k_021_1

Climate is the average weather condition of a place over a longer period of time. ( )

[--Ans: ✓--]

SE4a_u1_04k_022_2

Singapore and Beijing have a similar climate because they are both in the northern hemisphere. ( )

[--Ans: ×--]

SE4a_u1_04k_024_1

Melting of land ice causes sea levels to rise. ( )

[--Ans: ✓--]

SE4a_u1_04k_025_1

Carbon dioxide blocks the heat from releasing from the Earth's surface and causes global warming. ( )

[--Ans: ✓--]

SE4a_u1_04k_026_1

Carbon footprints are the amount of greenhouse gases produced in some human activities. ( )

[--Ans: ✓--]
